- 6) Set up a security method by following the prompts on the screen. Common free authenticator apps like Google Authenticator, Duo Mobile, and Okta Verify are all supported, as are security keys and biometric authenticators like Windows Hello and Touch ID. If your authenticator app is not listed as an option, select Google Authenticator and follow the enrollment instructions.

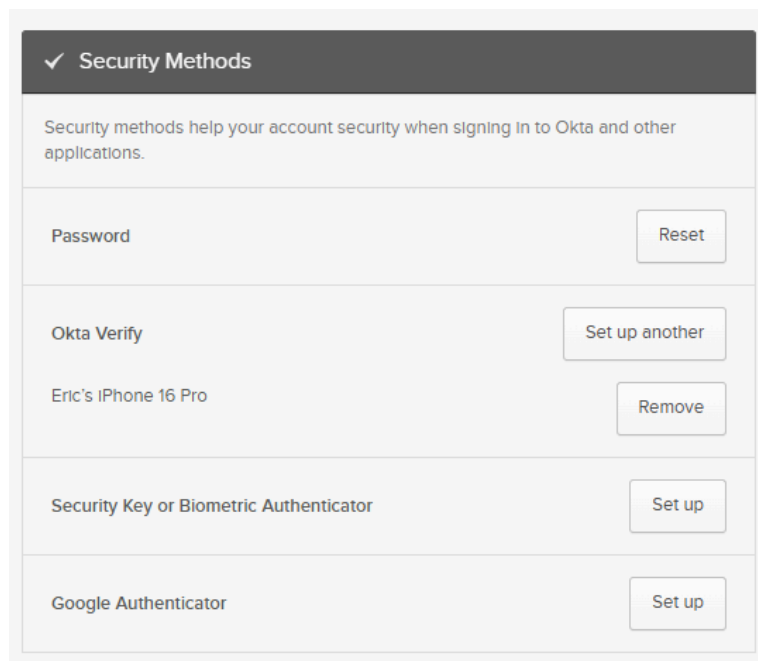

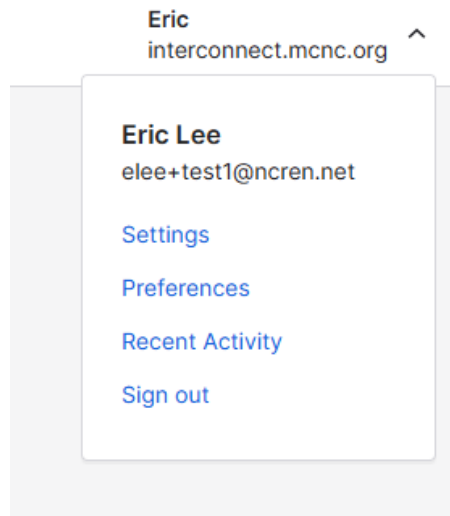

The screenshot shows a web page for setting up security methods. At the top is the MCNC logo. Below it is the heading 'Set up security methods' and the email address 'elee+oktademo@ncnrcn.net'. A message states: 'Security methods help protect your interconnect.mcnc.org account by ensuring only you have access.' Under the heading 'Required now', there are three options, each with a 'Set up' button:

- Google Authenticator**: Enter a temporary code generated from the Google Authenticator app. Used for access.
- Okta Verify**: Okta Verify is an authenticator app, installed on your phone or computer, used to prove your identity. Used for access.
- Security Key or Biometric Authenticator**: Use a security key or a biometric authenticator to sign in. Used for access.

At the bottom is a link: [Back to sign in](#)

Note: If you don't already have one of the authentication methods mentioned above, Okta Verify is recommended because it allows authentication via a push notification rather than requiring you to enter a password or PIN. Instructions for Okta Verify setup can be found at [this link](#).

In the future you can add or update verification methods by logging into the Okta portal (login.interconnect.mcnc.org) and going to 'Settings' in the upper right hand menu.

You should now be able to access MCNC tools by logging in with your newly created account. If you are unable to access a specific tool, please reach out to support@mcnc.org so the MCNC team can investigate.
